PROFILE

I build interfaces in React and TypeScript, and I care about how they feel to the people using them. I came to code through design: I graduated first of 143 in Environmental Design, then moved into HCI at UCD. I've shipped front-end code that around 1,000 museum visitors used every day, and on my own I built and deployed a Next.js agent in 24 hours that reached a hackathon final. I like owning a feature from the first conversation with users to the last line of CSS.

SKILLS

Front end: React, Next.js, TypeScript, JavaScript, HTML, CSS, responsive and multi-screen layouts, reusable UI components, accessibility and usability testing

Design: UI and UX design, interaction design, wireframing and prototyping, information hierarchy, visual design, Figma

Back end and tooling: Python, REST APIs, automated testing, SQL, Git and GitHub, Vercel deployment, Agile

AI: LLM APIs, AI agents, Vercel AI SDK, Model Context Protocol (MCP), AI-assisted development with careful code review

PROJECTS

Blink, AI Photo Selection Agent · Give(a)Go Agent Hackathon, Dublin — Mar 2026
TypeScript · Next.js · React · Vercel AI SDK · vision models

- Designed, built and deployed a vision-model agent on my own in 24 hours, from idea to a live UI on Vercel; finalist out of 65 teams.

Equine Health Guidance Platform · Individual project, built on MSc capstone — Jun – Aug 2026
TypeScript · React · CSS · Python · REST APIs · LLM API

- Built the product end to end: spoke with practising vets and horse owners, wireframed the flows, then built the React front end and a Python back end with REST APIs, covered by automated tests.
- Designed the screen so owners see one of two clear outcomes, call a vet or no action needed, instead of a page of data.
- Turned published clinical guidelines and vet interviews into structured logic that every answer is checked against.

Equine Sustainability App · MSc capstone, team of 5 — May – Aug 2026
JavaScript · Figma · Git · R · SQL

- Owned front-end development and data analysis in a five-person team working in Git. Our 90-respondent survey showed awareness did not predict behaviour ($p = 0.88$) and 63% wanted clearer guidance, so we redesigned the app around practical steps.

AI Job-Search Agent · Open source — Apr 2026
TypeScript · React · LLM API · MCP · github.com/jiajunxiao-work/job-tracker-agent

- Built and open-sourced an agent that scores how well a CV fits a job description and suggests edits, connecting external tools through MCP. Wrote the documentation so others can run and extend it.

WORK EXPERIENCE

Front-End Development Intern — Oct 2022 – Sep 2023
Shanghai Museum of Modern Art (MAM), China

- Turned visual designs into production front-end code (HTML, CSS, JavaScript) for multi-screen installations that ran daily through three-month exhibitions, with around 1,000 visitors a day.
- Ran on-site testing and visual QA across two exhibitions before launch; no visual defects were reported after go-live.

Project Lead, AI Product Innovation Initiative — Nov 2023 – May 2025
Shanghai Municipal Student Innovation and Entrepreneurship Programme, China

- Led design and technical direction for an AI interior design app that recommends furniture from a photo of a room and links straight to purchase. Took it from idea to working product with a five-person team over 19 months; selected from 68 teams for municipal funding.
- Released the app in three rounds to 800 users in total and reworked the UI after each round, based on what people did and said.
- Led debugging throughout development, and brought in two furniture companies who supplied 3D models and price lists, so the app worked with real products and real prices.

UX Intern — Jun – Sep 2022
Shanghai Himalayas Museum, China

- Interviewed and surveyed 200 visitors to map their journeys, then designed two prototype iterations and handed them to engineering and fabrication teams.

Technical Consultant (Part-time) Oct – Nov 2024

China Telecom Cloud, China International Import Expo 2024, Shanghai

- Explained cloud and AI products to non-technical decision-makers in English and Mandarin: handled 60+ enquiries from 10+ countries, ran live demos with engineers, and passed 53 client contacts to the technical team.

EDUCATION

MSc Human-Computer Interaction Sep 2025 – Sep 2026

University College Dublin, Ireland · Second Class Honours, Grade 1 (2:1)

- **Relevant modules:** User-Interaction Design, UX Research Methods, Data Visualisation, Quantitative Data Analysis

BA Environmental Design Sep 2021 – Jun 2025

Shanghai Jian Qiao University, China

- GPA 3.89 / 4.0, ranked 1st of 143 in year group; academic scholarship four years running; Product Design modules GPA 4.0 / 4.0
- Exchange semester, Chaoyang University of Technology, Taiwan (Feb – Jul 2024): product and interaction design modules, where I began teaching myself to code; GPA 4.26 / 4.3

AWARDS AND LEADERSHIP

- Third Prize in two national design competitions: Milan Design Week China Collegiate Design Competition; 9th Zhong Zhuang Cup National Undergraduate Design Competition
- Finalist, Give(a)Go Agent Hackathon Dublin 2026 (65 teams); IBM Enterprise Design Thinking Practitioner (certified)
- Founder and President, Starting Point Studio: founded and led a 30+ member student community spanning design, engineering and product
- Languages: English (fluent, C1), Mandarin (native), Korean (B1)
